

XIS-7555R

FEATURE HIGHLIGHTS

Rugged Mobile Design

Water Resistant & Tested for Extreme Conditions

High Image Resolution with 24-Bit Color

Enhanced Material Discrimination

Real-Time Diagnostics

Picture Perfect Image Analysis

The XIS-7555R is a ruggedized X-Ray Inspection System (XIS) with a tunnel opening of 75.6 cm x 55.2 cm (29.8" x 21.7"). Designed and tested for harsh outdoor conditions, including sandstorms and torrential rains, it features a stainless steel frame, an anti-corrosive powder-coating, and has been bulb-sealed to ensure water resistance. Heavy-duty castor wheels and shock-absorbing pads allow it to traverse rough roads, making it the ideal screening solution for deserts, maritime environments, and other rough terrain.

The 180kV generator provides high-resolution images and greater penetration. Combined with Astrophysics' exclusive 6 Color Imaging, the XIS-7555R allows operators to recognize objects, differentiate materials, and identify threats with better speed and accuracy.

Deployable anywhere, the XIS-7555R is the ideal solution for checkpoint screening in extreme conditions where the need for security is absolute.
